

## Chester Townscape 2020 Bulb Sale

**These bulbs are top quality, deer resistant, easy care,  
and will return year after year!**

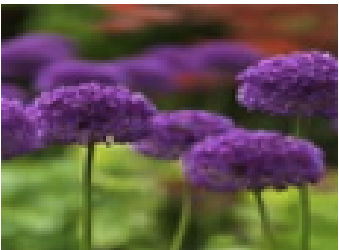

### **Evan Scent™ Mixed Daffodils**

**Bag of 12 bulbs for \$10**

Jonquils offer fragrance, as well as beauty. When you walk by or bring your nose near, you pick up a sweet perfume. This is a blend of four varieties, in yellow, white, and orange, that complement each other nicely and smell great. Introduced 2008. Bloom early-mid spring. If you want to naturalize daffodils (*i.e.*, plant them so they look as though they had sprung up on their own), we suggest that you set them out in drifts (not in blocks or lines) and that you

space the bulbs farther apart than recommended (to allow room for the clumps to increase in size). If you want to naturalize daffodils in a grassy area, you must wait to mow until their foliage has turned yellow, which means allowing the grass to grow very tall.

**Plant in well-drained soil; 6 inches deep, spaced 4 inches apart. Plant in full sun or semi-shade.**

### **Allium 'Purple Sensation'**

**Bag of 12 bulbs for \$10**

Beautiful, perennial, affordable. Purple Sensation bears 5-inch globes of rich purple flowers on tall stems. It is early for an allium, blooms on the heels of late tulips. Can be massed or planted in clusters in a perennial border. Sandy soil is ideal. Allium leaves begin to yellow by the time the flowers open. You can disguise the foliage by planting large alliums behind or among bushy perennials or shrubs, and small alliums among low-growing perennials. The

flower heads remain attractive for a time even after the color drains away. They can be left in the garden or cut and dried for use in indoor arrangements.

**Plant in well-drained soil; 5 inches deep, spaced 5 inches apart. Plant in full sun/afternoon shade.**

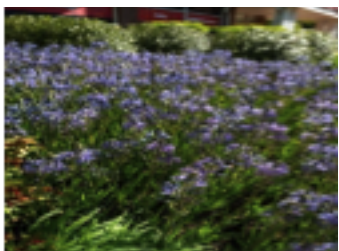

### **Summer Snowflake**

**Bag of 6 bulbs for \$10**

White bells line arching stems in mid spring. Snowflake prefers full sun, but tolerates some shade and thrives in soil too wet for most other bulbs. In a spot it likes, it can take up permanent residence. In the wild, snowflakes are found in damp meadows and on riverbanks, so they are a good choice for a spot where the soil is less than perfectly drained. Bulbs are slow to go dormant in summer; wait to cut back until the leaves have yellowed.

**Plant in average to wet soil; 6 inches deep, spaced 5 inches apart. Plant in full or part full sun.**

### **Camassia**

**Bag of 6 bulbs for \$10**

Starry, purplish blue flowers rise in loose spikes on tall, sturdy stems in late spring. Camassia is most effective when planted in clusters in a shrub border or grassy area, where it looks perfectly natural. Camassias are among the few bulbs that thrive in damp, or even wet, soil. Foliage is slow to die back in summer; do not cut before it has completely yellowed and collapsed.

**Plant in average to wet soil; 6 inches deep, spaced 5 inches apart. Plant in full sun.**
